

Eyecite

Forensic Imaging Software

- ◆ Capture, enhance and analyse forensic images including fingerprint and footwear images.
- ◆ Developed in accordance with best practice to maintain the quality and traceability of images.
- ◆ Unique features for examination and note taking.

Developed with and Used by Police Forces

Designed with and used by police forces in the UK for the handling of digital forensic images.

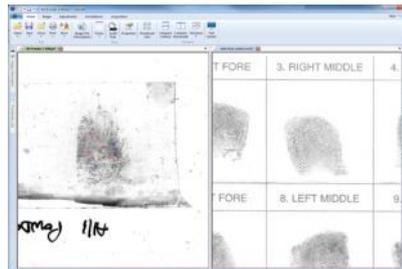

Eyecite allows forensic images to be captured, enhanced and examined efficiently. Based on a long standing relationships with police forces, and an understanding of the processes involved.

A proven ability for handling forensic images, used to process thousands of images every month.

Inspect and Compare

Inspect and compare images on screen in their best quality using Eyecite's unique capabilities for displaying and handling high resolution images.

Zoom, rotate, and move images in an instant using a mouse or touch screen monitor or tablet.

Enhance

Automatically or manually adjust the whole image, or areas within the image with a set of easy to use tools.

Processing changes are recorded and permanently associated with the image to maintain a constant and visible audit trail.

Scale and convert images for compatibility with Ident 1.

Built in Note taking and Annotation

Enhance best practice with the ability to record contemporaneous notes directly from the software and permanently associate them with the image.

Use annotation tools to select areas and points on the image, or make freehand annotations.

Save all annotations with the image without affecting the integrity of the image

Built to be Customised

Customisable user interface, data entry forms, point classifications, and acquisition. Lets us target the software for your needs.

Touch Me

True multi-touch enabled for fluid and intuitive image manipulation.

Stylus compatible for accurate annotation.

Data Source Integration

Optionally integrate with an existing image database or digital asset management system, or use a custom database solution.

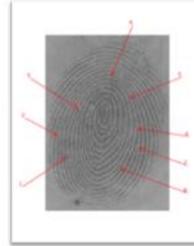

Capture, Print & Burn

Acquire images directly into the software from a range of digital cameras and scanners at scenes of crime or in the lab. View live images and batch process.

Automatically generate backup copies, burn directly to CD and print images to scale.

Court Presentation

Prepare evidence for court by marking up images to prepare for on screen presentation or printing.

Microsoft Office Integration

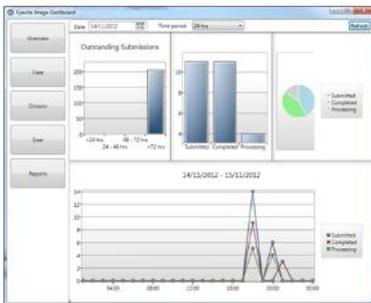

With Microsoft Word integration images may be viewed and manipulated with mark up from within Word.

Import images to generate Word documents including all information added from Eyecite including audit trail, point classifications and notes.

Image Management Dashboard

Combine Eyecite with automated image submission and an image management database to enable use of the Management Dashboard.

Monitor activity levels and submission statuses, view current or historical data, generate reports, and enhance traceability with this customisable management tool.

Submission ID	Submission Status	Last Status Time
1	Completed	13/04/2012 10:41:41 AM
2	Completed	13/04/2012 10:41:41 AM
3	Completed	13/04/2012 10:41:41 AM

24	Completed	13/04/2012 10:41:41 AM
25	Completed	13/04/2012 10:41:41 AM

Time	User Name
13/04/2012 10:41:41 AM	
13/04/2012 10:41:41 AM	

Enterprise Ready

Industry standard deployment and on going support for smooth installation and maintenance.

Familiar Modern Design

A modern and flexible user interface designed to be familiar to users of modern productivity software.
