

# Eyecite Imaging Software

- ◆ Capture, enhance, analyse images and record results while maintaining image quality.
- ◆ Zoom, rotate and pan high resolution images with ease.
- ◆ Manage image files with multiple backups, burning to disc and database integration.

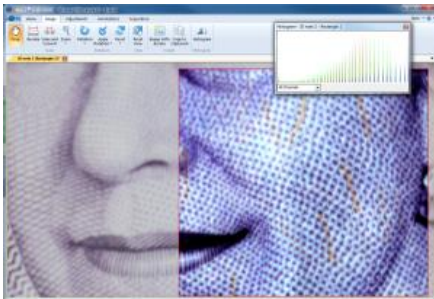

## Inspect and Compare

Inspect and compare images on screen in their best quality using Eyecite's capabilities for displaying and handling high resolution images.

Zoom, rotate, and move images in an instant using a mouse or multi-touch monitor or tablet.

## Enhance

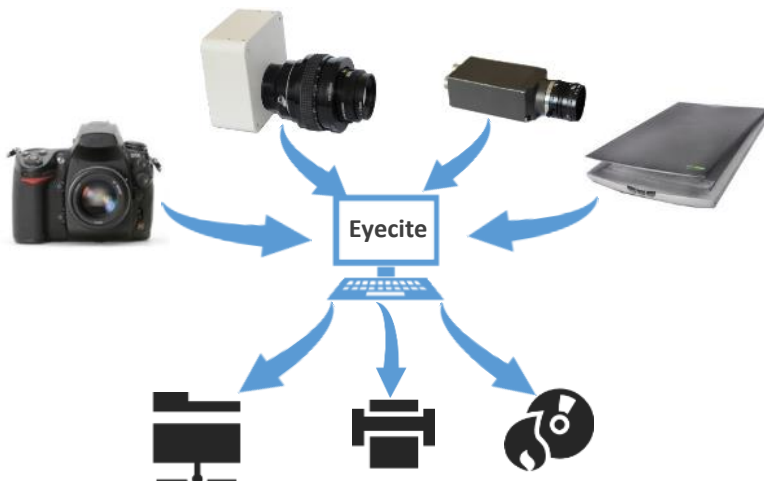

Enhance images with built in manual or automatic image processing, or add custom processing tools for your application.

Track changes applied to images, view the change history and related images.

## Capture

Capture live images from a range of cameras, integrate your existing camera, or use our experience and connections to find an appropriate capture device for you.

View manipulate and annotate live images in real time. Automatically generate master copies, print or burn to disc direct from the software.

### Built to be Customised

Customisable user interface, data entry forms, point classifications, and acquisition. Lets us target the software for your needs.

### Touch Me

True multi-touch enabled for fluid and intuitive image manipulation.

Stylus compatible for accurate annotation.

### Data Source Integration

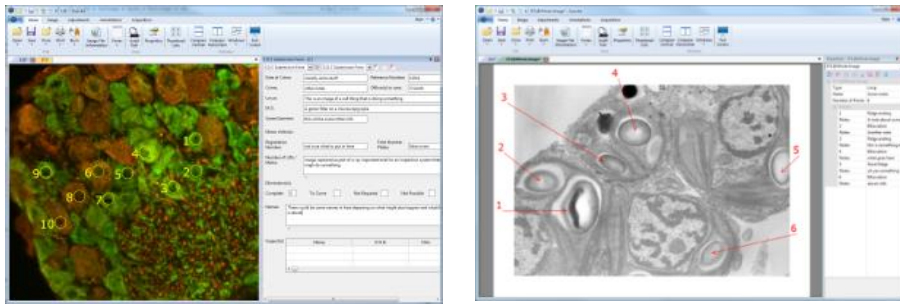

Optionally integrate with an existing image database or digital asset management system, or use a custom database solution.

## Built in Note taking and Annotation

Record notes and add data entry forms and permanently associate them with the image.

Use annotation tools to select areas and points on the image, or make freehand annotations.

Save all annotations with the image without affecting the integrity of the image

## Microsoft Office Integration

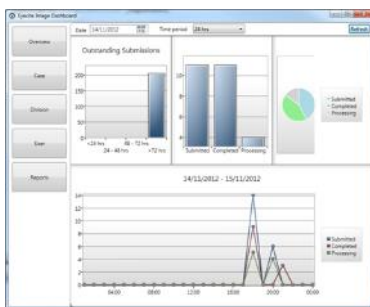

With Microsoft Word integration images may be viewed and manipulated with annotations from within Word.

Import images to generate Word documents with information added from Eyecite including audit trail, point classifications and notes.

## Image Management Dashboard

Combine Eyecite with automated image submission and an image management database to enable use of the Management Dashboard to:

- Monitor activity levels and submission statuses
- View current or historical data
- Generate reports
- Enhance traceability

Submission ID	Submission Status	Last Status Time

### Enterprise Ready

Industry standard deployment and on going support for smooth installation and maintenance.

### Familiar Modern Design

A modern and flexible user interface designed to be familiar to users of modern productivity software.
